Project Reference

QXXXX

Project Scientist

PM

pm@qbic.uni-tuebingen.de

Offer Duration

30 days.

Delivery Time

Approx. 4-8 weeks upon data retrieval.

QXXXX - Project Title

Objective: Describe what the project is about here. Make sure not to write in too much detail as we want to prevent unauthorized people to get too much knowledge about the project.

Experimental Design: Explain the experimental design in detail.

Bioinformatics Analysis: Explain in short what analysis will be performed.

Offer Description: This offer includes costs for library sequencing, data analysis, project- and data management and the development of a singlecell RNA-Seq pipeline. The samples will be tracked throughout the project by unique barcodes that will be provided by QBiC. A FPKM table will be provided. Adjust the text above as required by the project.

Estimated Total (net):

X,XXX.XX €

Detailed cost information for individual work packages (listed by internal package IDs) can be found on the second page.

Agreement

The invoice will be issued after completion of the project. Quality control at all steps of the data processing will guarantee that the processed data is in accordance to DFG (German research foundation) guidance for good scientific practice. All project related data will be kept securely on our local infrastructure. If the data generated through the project as outlined in this offer is subject to publication, QBiC offers to collaboratively contribute to the compilation of the manuscript and its scientific discussion (e.g., with respect to bioinformatics methods, visualisation of results and their technical interpretation). If such collaborative efforts lead to a significant scientific contribution, co-authorships on reports/manuscripts for QBiC scientists that have been involved in the study are expected. All contributions that do not meet the criteria of authorship should be recognized in the acknowledgements section by stating "the xyz part of the work was supported by the Quantitative Biology Center (QBiC) of the University of Tübingen". Should the project deviate from the plan outlined above, the customer will be contacted by QBiC again in order to discuss the continuation of the project.
